

THE Cheshire Cat's GARDEN

Cats are obligate carnivores, meaning they require high quality meat for their diet to be healthy.

Recipes in The Cheshire Cat's Garden cat food range use a minimum of 80% meat and fish, including organ meat such as heart and liver, which are sources of rich, quality protein. The Cheshire Cat's Garden range is therefore grain-free, with a very low carbohydrate content.

This makes The Cheshire Cat's Garden one of the most palatable cat foods available – even the fussiest cats get excited about meat and fish!

These high-protein recipes are blended with cranberry to support urinary tract health. They also contain green lipped mussel, as well as glucosamine and chondroitin to provide support for active joints. This makes The Cheshire Cat's Garden a healthy choice as well as a tasty one!

There are never any artificial colours, flavourings, preservatives or fillers like wheat or corn in The Cheshire Cat's Garden. All ingredients are listed honestly on every pouch, so you can be sure there are no hidden nasties.
